

Split Heading: Spatial Evidence

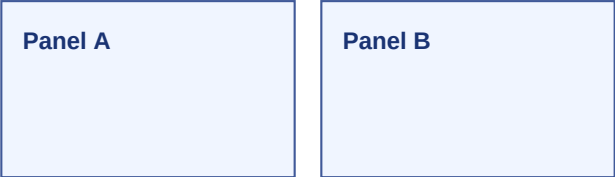

Left column preserves reading order across a narrow synthetic layout. Right column contains a separate evidence thread.	
It contains prior work [3, 5-7] and a short inline $f(x)=x^2+1$.	A reference such as (Rivera and Chen, 2024) stays local.
The layout is deliberately deterministic for source-range tests.	No external publication text is included in this fixture.

Tables, Figures, and Display Equations

Table 1. Merged cell test

Merged header cell	
A	B

Figure 1. Multipart chart

$$E(x) = \text{sum_i } (x_i - \mu_i)^2$$

A display equation remains a distinct object.
Panel ownership is recorded separately from its caption.

Equation Edge Cases and References

Inline: $f(x)=x^2+1$

$$a_1 + a_2 = b$$

$$a_2 + a_3 = c$$

The multiline expression above is one logical fixture object.

Reference entry: [3] Rivera, Synthetic Methods

The author name is synthetic and not a personal document.
